

e3 Systems expands global network of distribution and installation partners.

Leading solutions provider extends global reach to meet demand for new flat panel technology.

Palma de Mallorca – 15 March, 2018: To meet the growing demand for Kymeta™ flat panel antennas and terminals, Palma-based e3 Systems, the leading global communications integrator and solutions provider for the marine industry, has announced the appointment of a number of new Certified Distribution Partners (CDPs) and Certified Installation Centres (CICs).

e3 welcomes **Admarel** and **Tijssen Elektro** in the Netherlands, **H&M** in Germany, **Satlink** in the UK, **Ubicon** in Brazil, and **Atlantic Radio Telephone, IMS** and **S3** in the USA. We also welcome **C.N. Sat** in Italy and **Elnetcom** in Greece as our latest Certified Installation Centres (CICs) and **Randal Burg** in the USA as an introducer.

Mathieu Cros, Channel Sales Manager at e3 commented: "Each of these partners offers exceptional experience in the satellite communications sector together with unprecedented knowledge of their local market. Our new network reflects both very established yacht builders and refitters, as well as newcomers keen to be part of the new era of connectivity that Kymeta represents. We look forward to announcing more partners shortly."

About Kymeta

What's the missing link to connecting billions of people to high-speed mobile access? Antennas. And Kymeta offers the world's only commercially-viable electronically-scanning satellite antennas and terminals. Kymeta antennas and terminals deliver high-throughput communications for land, sea, and air, making mobile connectivity as available as a view of the sky. Plus, the world's largest satellite operator, Intelsat, has joined forces with Kymeta to deliver KĀLO™ global access services that combine with Kymeta antennas and terminals to provide revolutionary mobile connectivity. Without Kymeta mTenna™ technology, connecting and staying connected to all those new satellites while on the move will be difficult, if not impossible.

If it moves, Kymeta keeps it connected. Anywhere.
